

Parade Technologies

Leading ICs supplier for a variety of popular display and high-speed interface standards used in computers, servers, consumer electronics and display panels

March 16, 2026

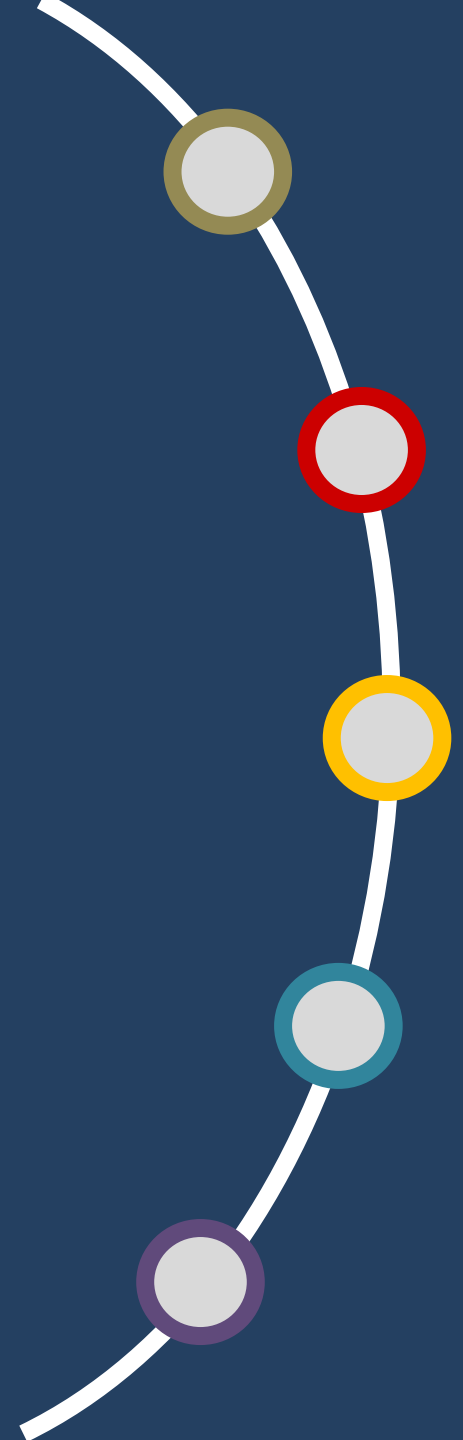

Safe Harbor Notice

This presentation includes forward-looking statements. All statements, other than statements of historical facts, that address activities, events or developments that Parade Technologies Ltd. expects or anticipates will or may occur in the future (including but not limited to projections, targets, estimates and business plans) are forward-looking statements.

Parade's actual results or developments may differ materially from those indicated by these forward-looking statements as a result of various factors and uncertainties, including but not limited to price fluctuations, actual demand, exchange rate fluctuations, market share, competition, environmental risks, change in legal, financial and regulatory frameworks, government policies, international economic and financial market conditions, political risks, cost estimates and other risks and factors beyond our control.

Parade does not undertake any obligation to publicly update any forward-looking statement to reflect events or circumstances after the date on which any such statement is made or to reflect the occurrence of unanticipated events.

About Parade Technologies, Ltd.

- Leading expertise in DisplayPort technology and high-speed digital interface transmission
- Industry's rich portfolio of high-speed interface product
- Market leader in DP/eDP timing controller
- Rich portfolio of touchscreen and integrate display solutions
- Strategic collaboration with leading CPU/GPU vendor and tier-1 global brand end customers

Company founded	**TPEx IPO (4966)**	**Employees**	**Patents worldwide**
2005	**2011**	**760+**	**295+**
Acquire Cypress TrueTouch	**Acquire Fresco Logic**	**Acquire Spectra7**	**FY25 revenue**
2015	**2020**	**2025**	**$531M**

Parade's Products

High-Speed I/F

- Re-driver/Re-timer/Mux/Convertors/Hub/Host/PD
- Support DP2.1a, USB3.2 Gen 2x2 , USB4, HDMI 2.1, PCIe6
- Convertors (DP 2.0 to HDMI 2.1)/(DP to LVDS)
- USB 4 Hub; USB Type-C PD
- USB 4 Host Controller
- For PC/ Notebook/ Desktop/ Tablet/ TV/ Server/ Automotive/ Dongle applications

DP/eDP TCON

- eDP v1.5 Tcon support Panel Replay up to UHD 144Hz and FHD360Hz
- eDP Tcon support AMOLED panels
- Mini-LED backlight controller(Bcon) support local dimming display
- Highly integrated eDP v1.2/1.4b/1.5 Tcon with embedded driver(TED) and touch(tTED)
- For Tablet/ Notebook/All-in-One / Monitor/ Automotive applications

Source Driver

- Point-to-Point source driver; SIPI / iSP source driver
- TSD(Touch Source Driver); TLS(Touch Level Shifter)
- For Notebook/Tablet/Automotive panel applications

Touch Controller

- Single touch, two-finger touch and muti-touch for screen size from 1.5"~17"
- TDDI/Flexible AMOLED touch controller
- For Smart phone/Tablet/Wearables/E-reader/ Automotive/Post machines

Data Interface migrating to higher speed:

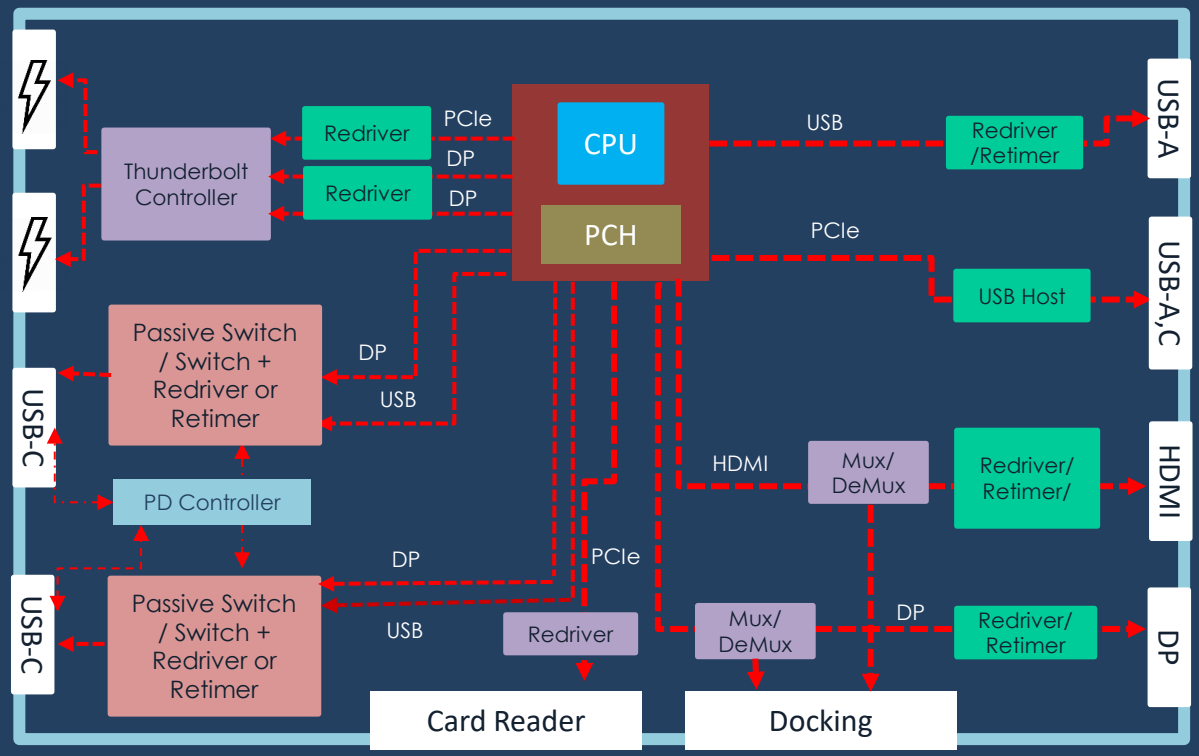

- USB Type-C goes to 40 Gbps; HDMI goes to 12 Gbps; DP goes to 20 Gbps; PCIe goes to 64 Gbps
- Strong demand for high-speed technologies to solve high-speed transmission problems
- Ability to provide rich portfolio and integrated solution for USB-Type C and next generation high-speed interface applications

Roadmap on Digital Interface Bit Rates

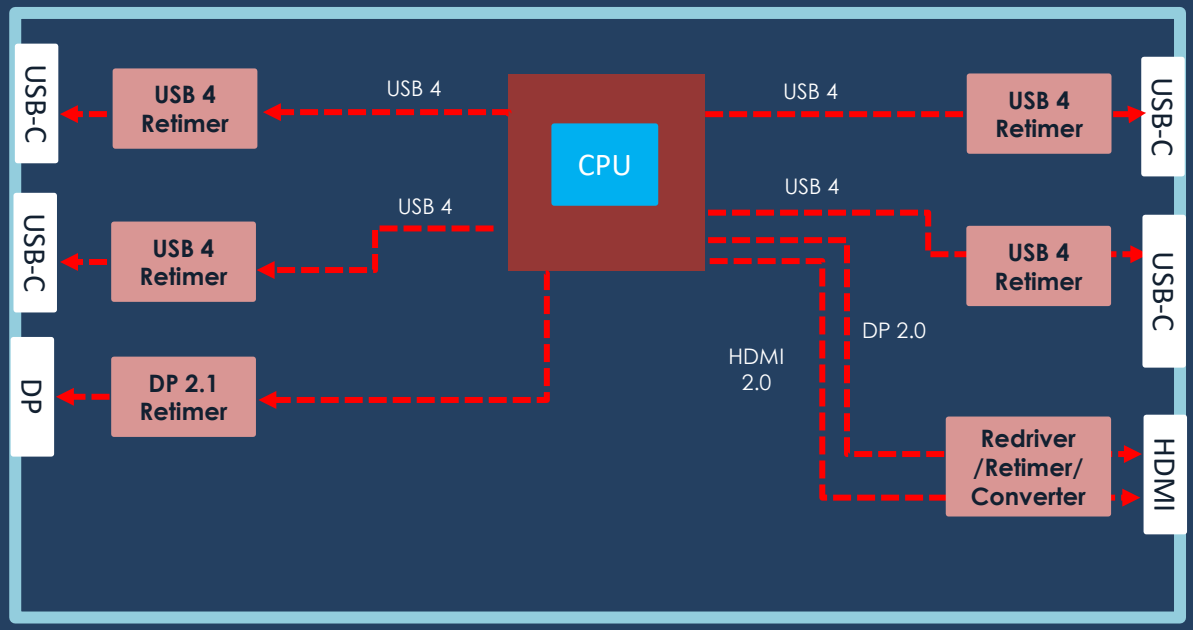

Notebook Inter-connection solutions – Current 3Gb/s ~ 16Gb/s

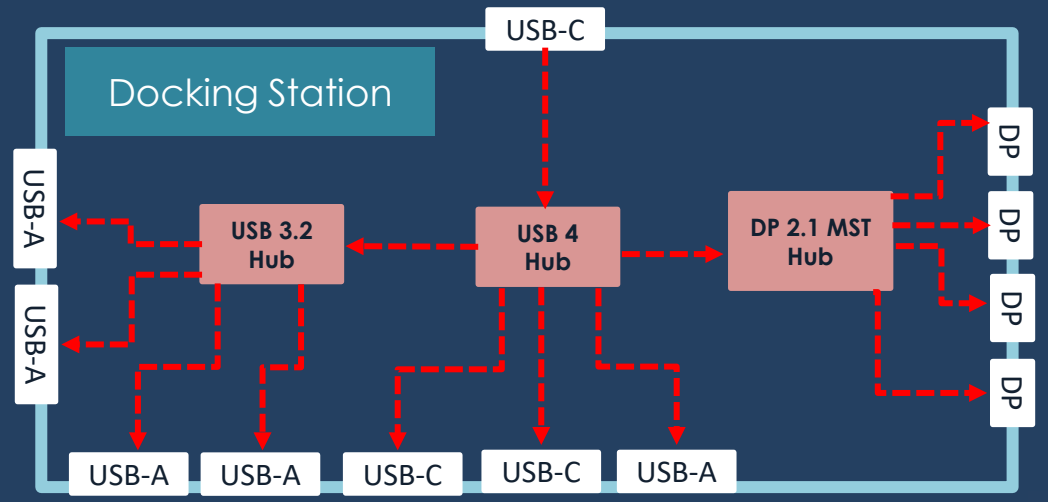

- Protocol data rate move to higher speed causing channel loss significantly impact signal integrity that demand re-drivers or re-timers
- Market leader in USB Type-C 10Gb/s re-timer and re-driver
- HDMI 2.0 repeater with Jitter cleaning is market best solution to solve design challenge of HDMI 2.0
- HDMI 2.1 re-timer fully compliant to HDMI 1.4/2.0/2.1 with low standby power and robust performance targeting 8K applications
- DP 2.0 to HDMI 2.1 converters support to expand HDMI2.1 connectivity
- PCIe3/4 low power linear re-driver extend topology of on board design
- DP1.4 retiming Mux/DeMux for discrete GPU on gaming/workstation applications

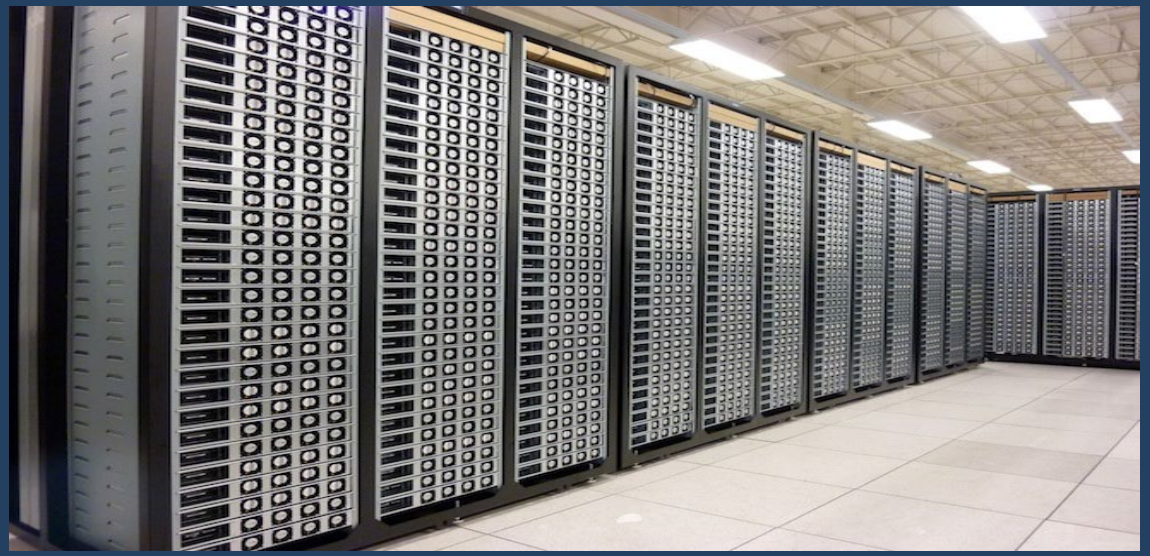

Notebook Inter-connection solutions – Future ≧ 20Gb/s

- USB4 introduce the ability to support multiple protocol and different data rate up to 20 Gb/s. Notebook demand USB4 as USB-C standard
- Industry encountering design challenge when data rate goes up to 20 Gb/s
- Parade has introduced PS8830/PS8833/PS8778 USB4 Re-timer/Re-driver and is industry's first USB4/DP 2.1/TBT 4 re-timer/re-driver solution available on the market
- DP2.1 re-timer solution help to support 8k and above with higher refresh rate
- USB4 Hub for docking station application
- DP 2.1 MST Hub for docking station, MST video hub, daisy-chain monitor/signage application
- USB5 or USB4v2 (40 Gb/s) re-timer with new technology for next generation platform

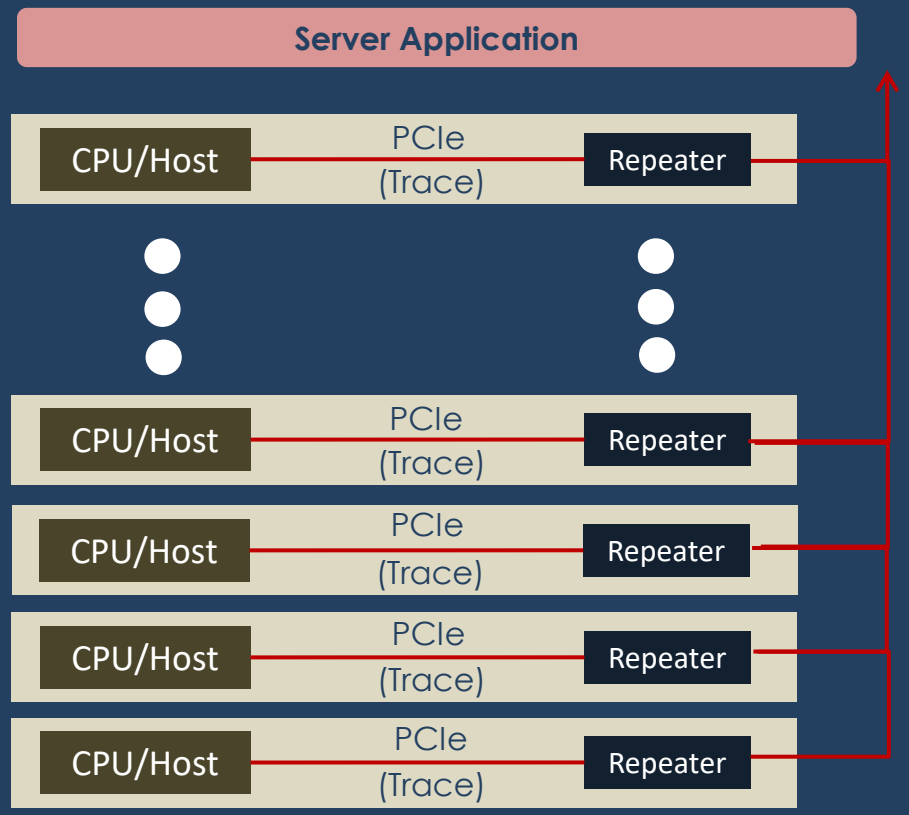

Data Center:

- PCIe goes to >16 Gbps
- Increasing demand of signal integrity for data center or workstations

Server Application of PCIe repeater

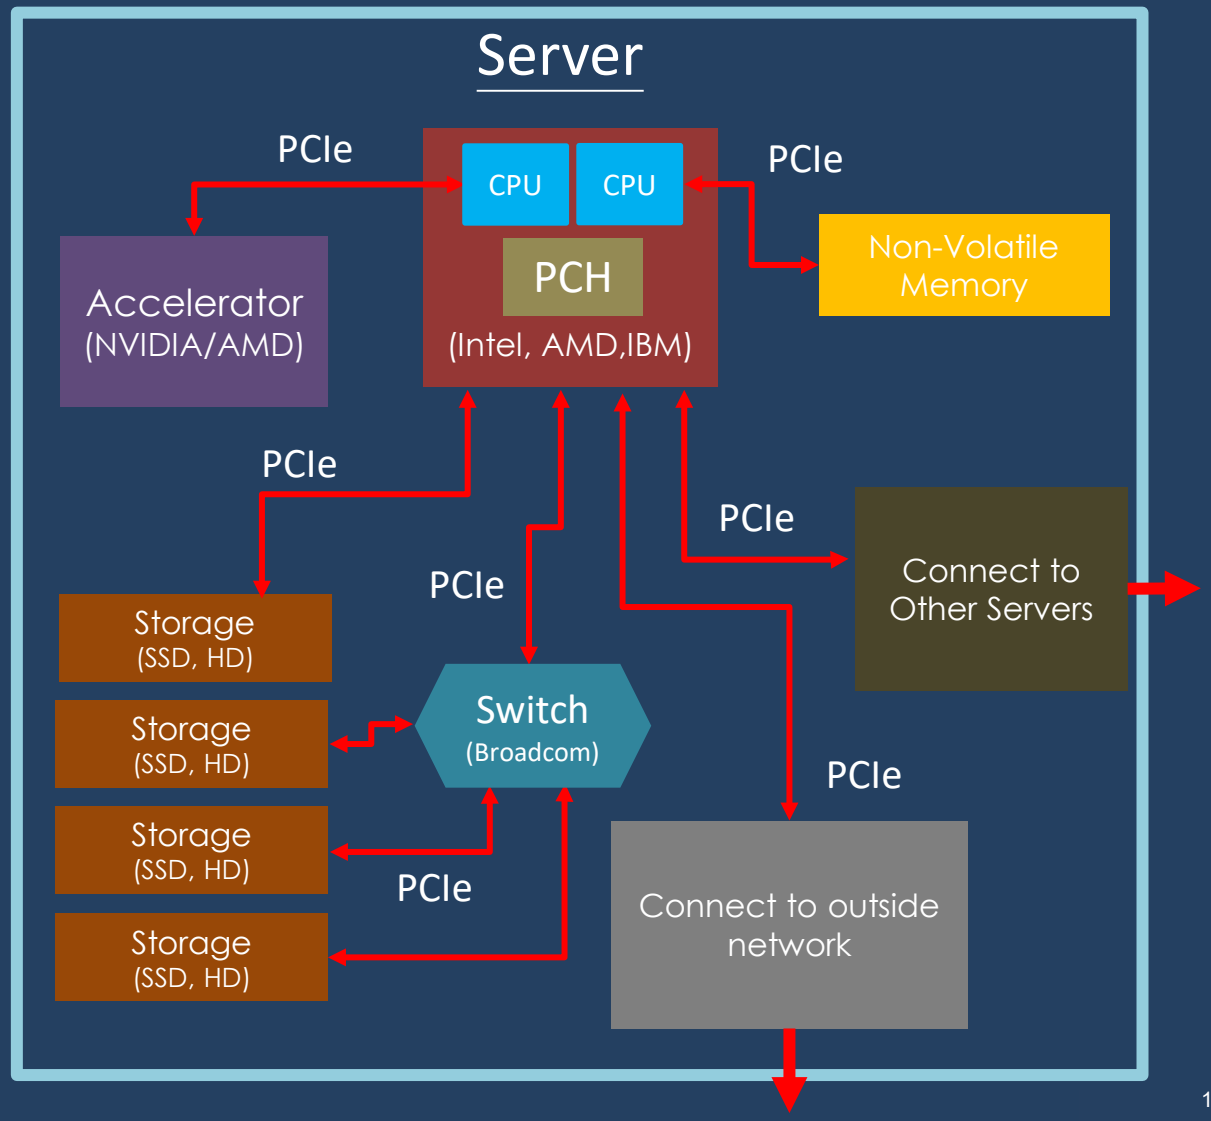

- Servers inherently require the use of long interconnects and multiple connectors to transfer signals.
- By incorporating Parade's repeater into the signal path, either on the system PCB or within the interconnect cable, the PCB path or interconnect cable can be made longer

Server Inter-connection solutions – 8Gb/s ~ 32Gb/s

- With PCIe 5(32Gb/s)/ PCIe 6(64Gb/s), data rate has increased by 2x/4x compared to PCIe 4 (16Gb/s), resulting in shorter channel reach
- It is expected that significant number of platforms using PCIe 4/ PCIe 5/ PCIe 6 will require re-drivers and re-timers
- Re-driver/ Re-timer common use cases include channels expanding over system boards, backplanes, cables, risers and add-in cards
- Parade PCIe 4 re-driver and PCIe 5 re-timer has been introduced in January 2023. PCIe 6 re-driver has been introduced in September 2025. we have seen more business opportunity for PCIe 6 and PCIe7 re-driver due to data transmission speed continue increasing
- Spectra7 has mass production 56Gbps re-driver. 112Gbps is under engaged with customers

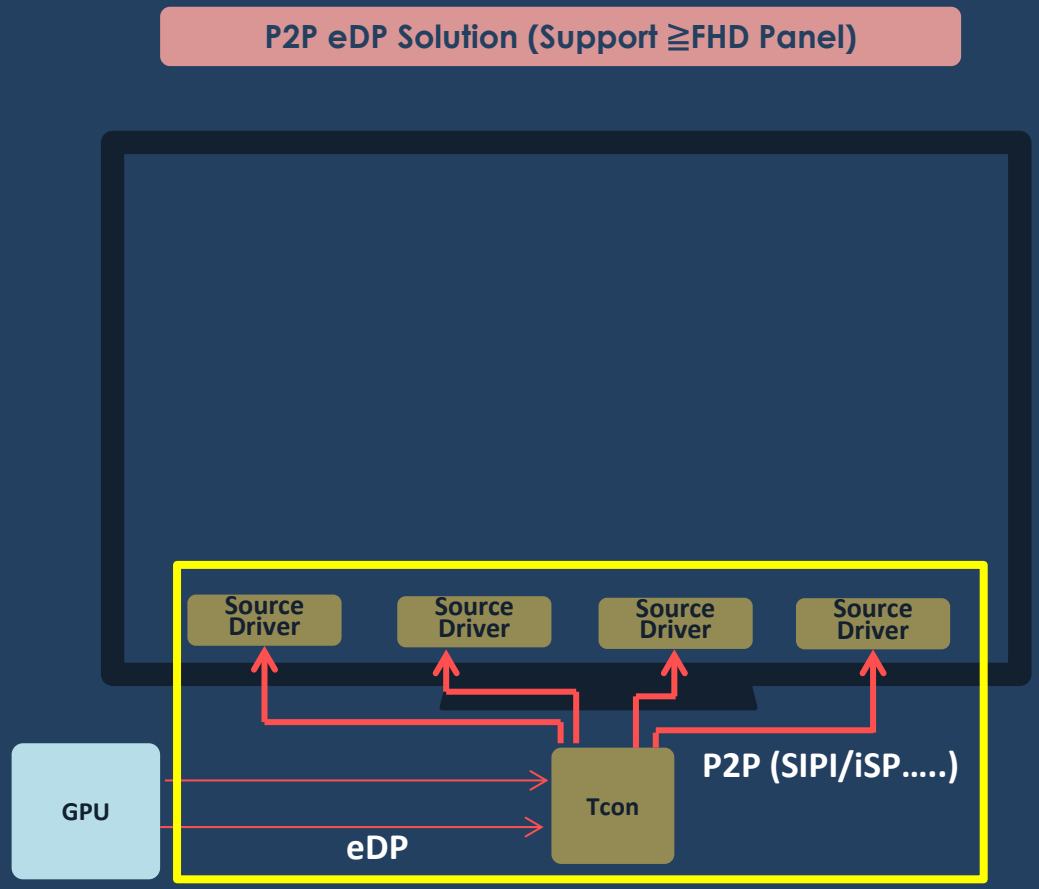

Display: Faster speed and higher bandwidth

- Industry increasing adoption of eDP 1.5 Tcon and bundle solutions(Tcon + Source Drivers)
- NB/Tablet panel has trend to support borderless panel and in-cell touch that demand highly integrated chips

Mainstream ≧FHD Panel: Bundle solution (eDP Tcon + SIPI Source Driver)

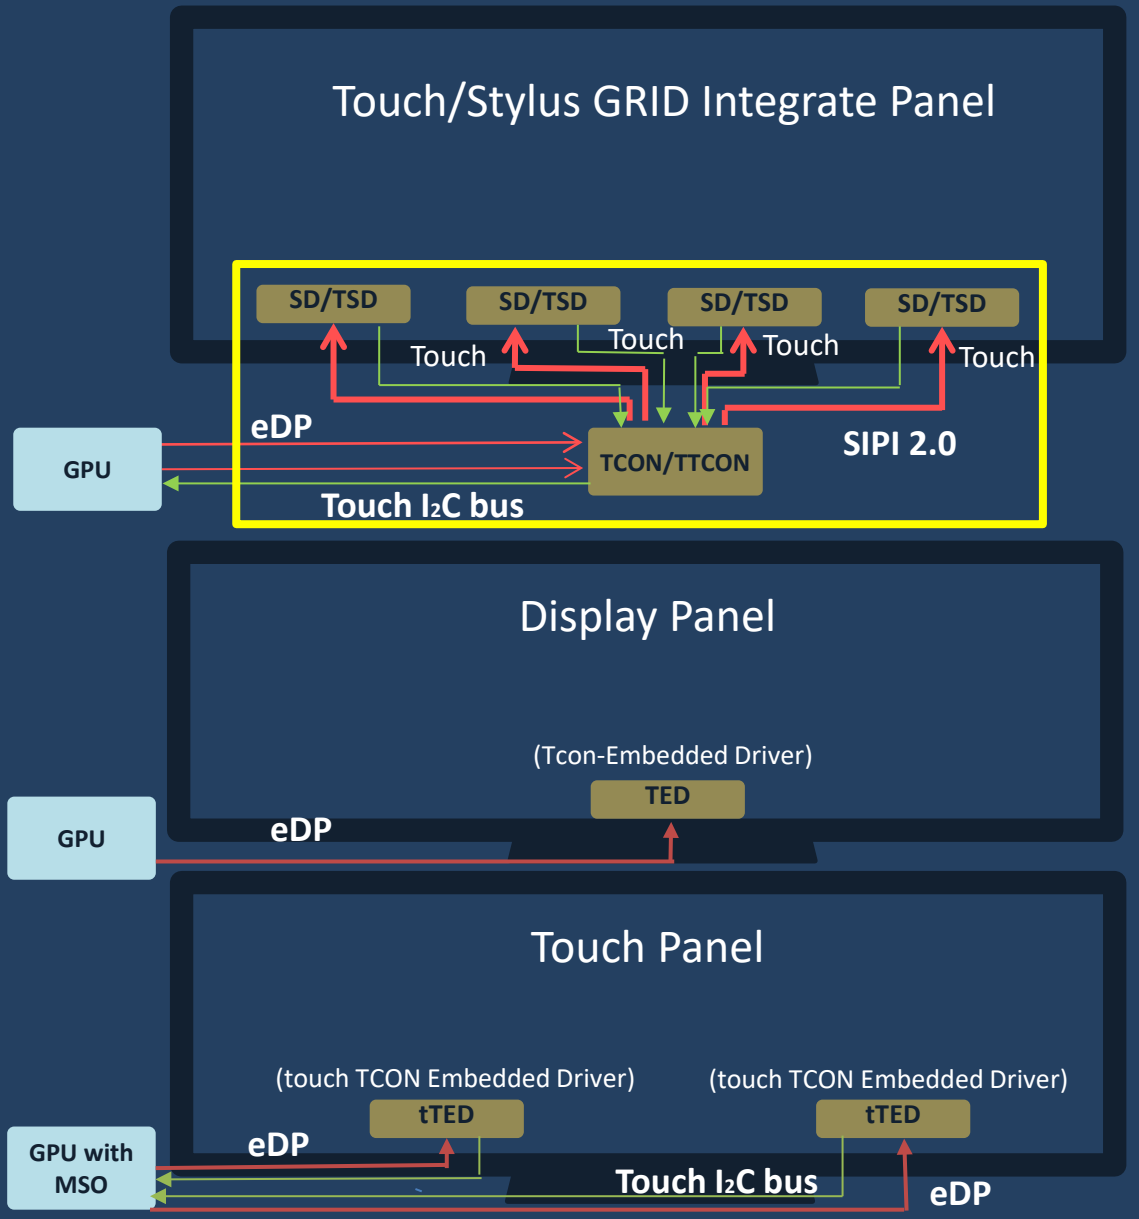

- For higher resolution (or higher refresh rate) panels, existing source drivers becomes a bottleneck (mini LVDS = serial connection, low speed)
- SIPI is a proprietary high-speed driver (point-to-point, high bandwidth) to improve performance

- Parade is leading industry to provide most advance products :
  - Very low power eDP 1.2 v Tcon with Smart-Backlight TM feature
  - eDP 1.4b Tcon support up to UHD and 120 Hz refresh rate
  - eDP Tcon for AMOLED Panels supports eDP 1.4b for Extended Battery Life
- Bundle solution become mainstream solution in NB panel industry
- Secured design-wins with major OEMs
- eDP v1.2 and eDP v1.4 TCON paired with SIPI source driver has design-in/win with many panel makers and are leading solutions for NB/Tablet panel

Advance Panel: Flexible/Integrated in-cell solution

- TED (Tcon embedded driver) solution for thin-profile panel has mass production
- tTED (Tcon embedded driver and touch) has introduced; with MSO and PSR features; supports in-cell and stylus touch
- Parade has Introduced discrete in-cell solutions for Touch/Stylus GRID Integrate Panel: TTCON(Touch TCON),TSD(Touch Source Driver) and TLS(Touch Level Shifter) form a complete in-cell touch solution for high resolution displays.
- Parade integrated in-cell solution may support Wacom/MS/USI active pen
- SIPI 2.0 with embedded in-cell touch data channels is a point-to-point interface between the Touch Embedded Timing Controller (TTCON) and the Touch Source Driver (TSD)

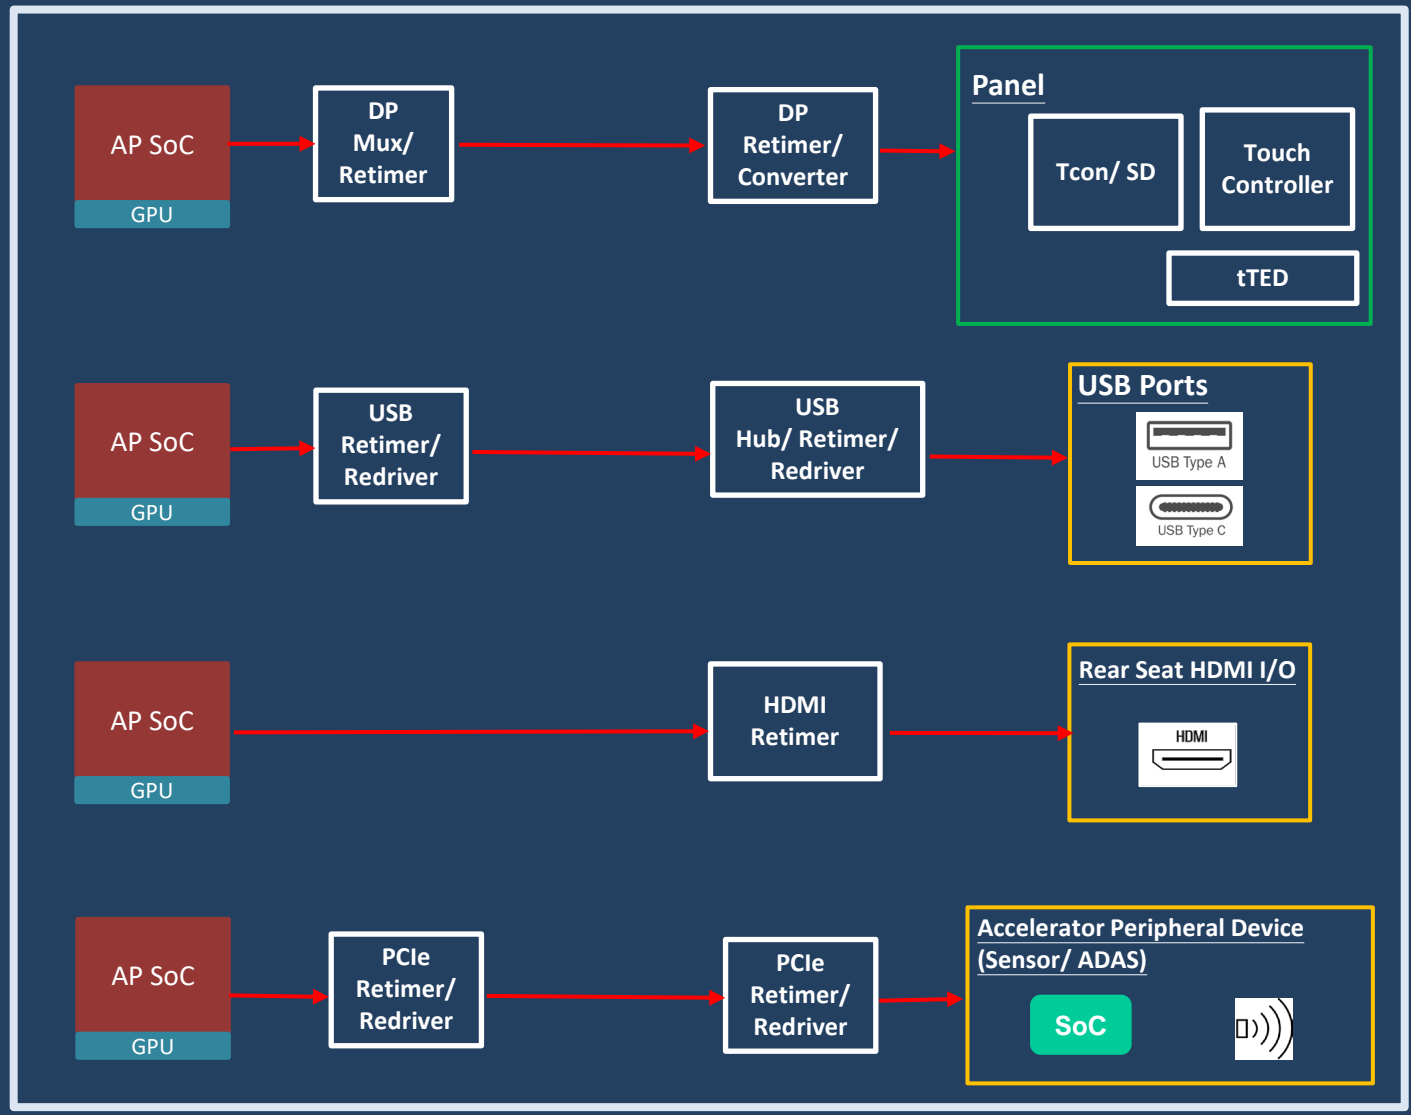

Automotive:

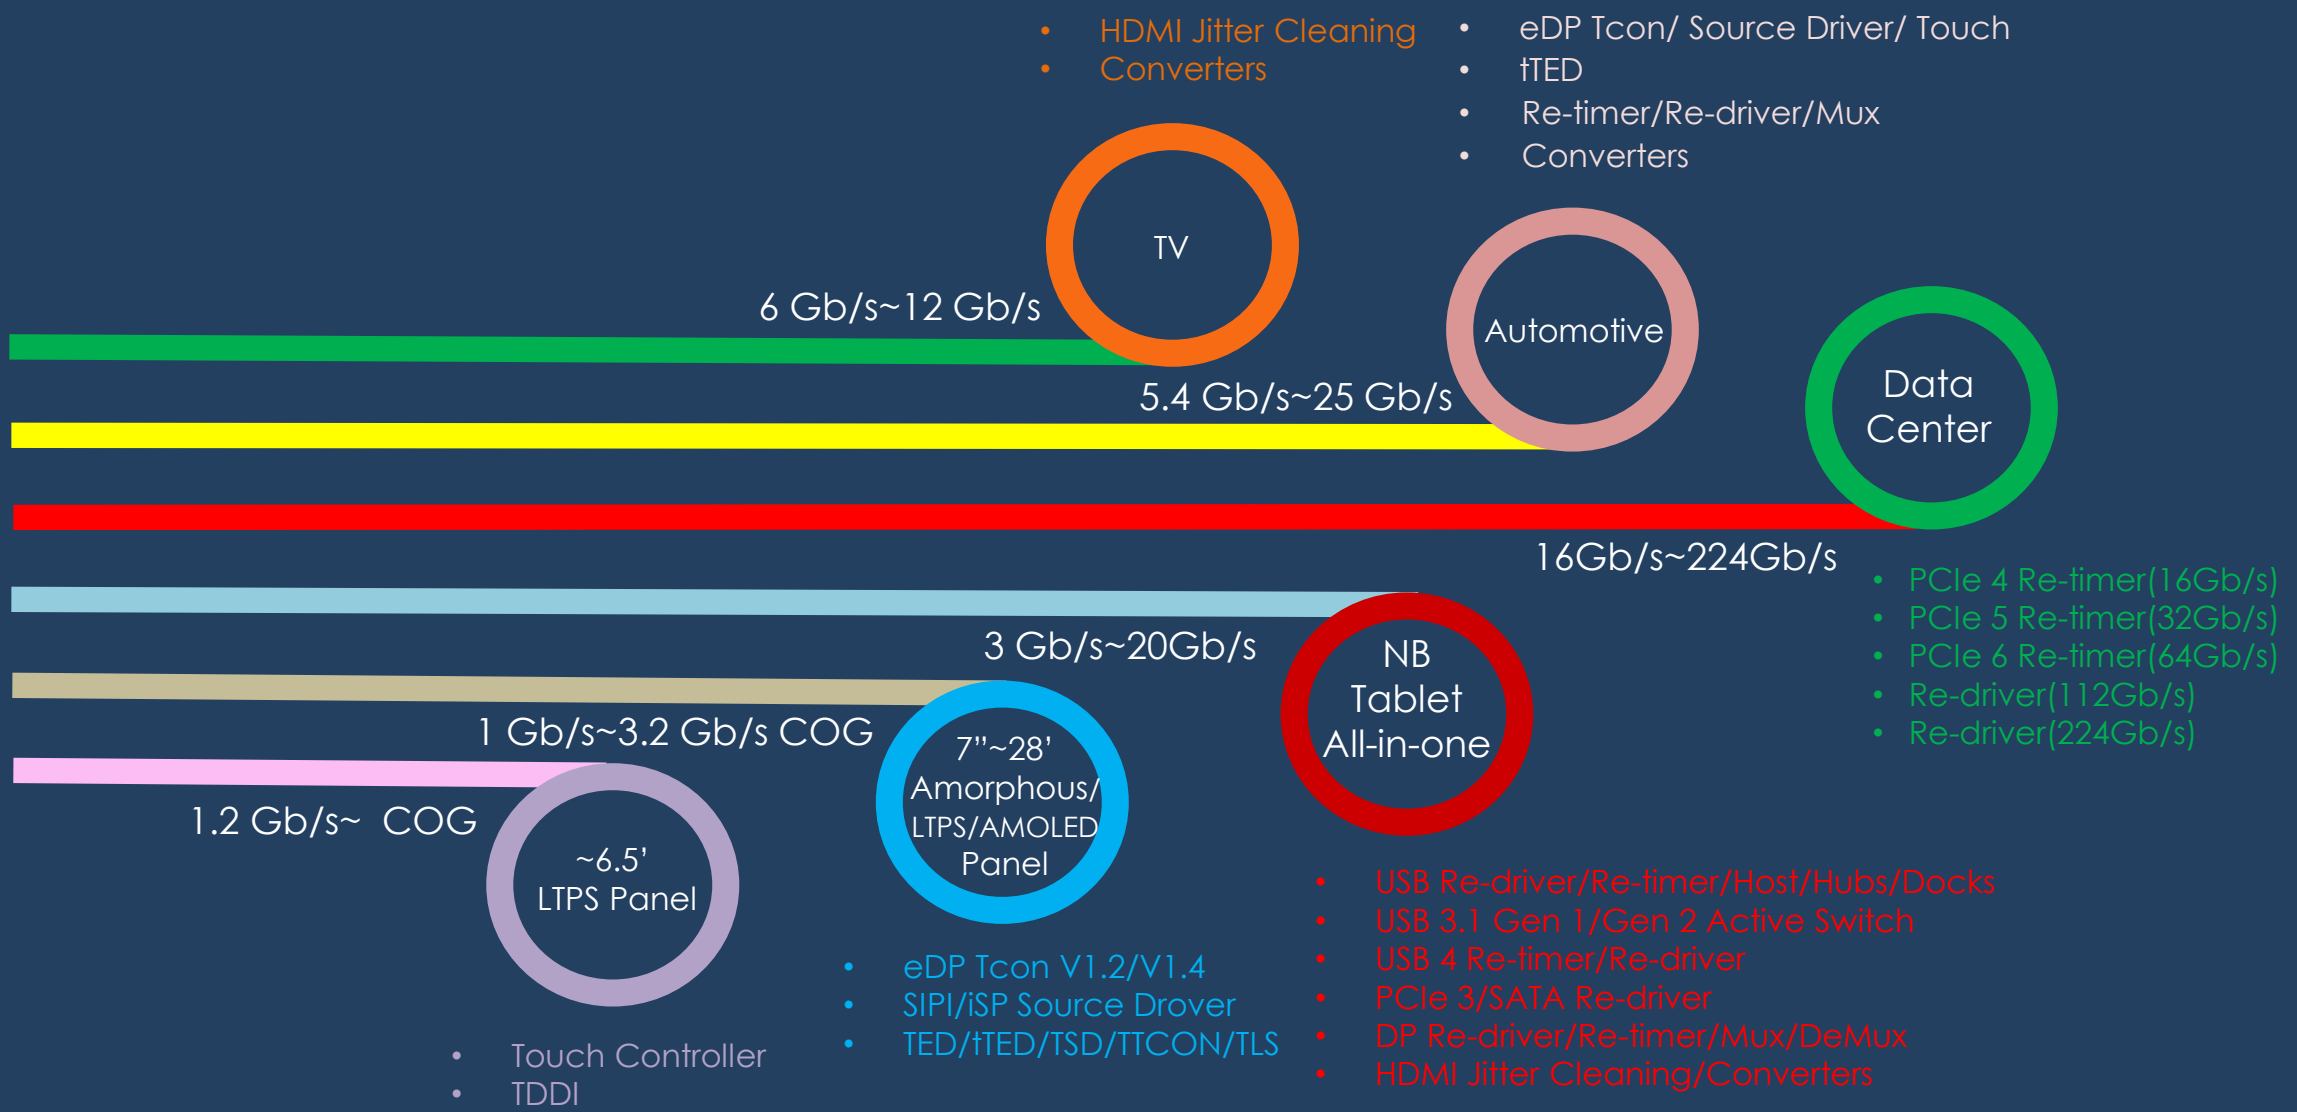

- Automotive leans to adopt DP similar standard for their advanced panel display
- Demand for less wires and high-speed transmission

Parade Opportunities in Automotive

- DP/eDP is the interface of choice for new Automotive SoC
- Display panel will move from LVDS to eDP/DP as performance is required
- DP 1.4 retiming Mux + DP to LVDS Protocol Converter provide a cost effective solution to replace current FPDLink SerDes solution in automotive
- DP 1.4 retiming Mux has shipping to Tier-1 automotive company
- eDP Tcon + source driver + touch controller and local dimming technology supporting auto security provide a total solution for central infotainment and instrument cluster display

Business Outlook

Based on current business outlook, Parade is providing the following guidance for the first quarter of fiscal 2026:

- Revenue: US$119.75 – 132.25 Million
- Gross margin: 40% - 44%
- Operating expenses: US$33.0 – 36.0 Million

Thank You
