Compound Semiconductor Solutions from RF to Lightwave

WIN Semiconductors 4Q2025 Investor Conference

February 2026

Safe Harbor Notice

- This presentation contains certain forward-looking statements that are based on current expectations and are subject to known and unknown risks and uncertainties that could cause actual results to differ materially from those expressed or implied by such statements.
- Except as required by law, we undertake no obligation to update any forward-looking statements, whether as a result of new information, future events or otherwise.

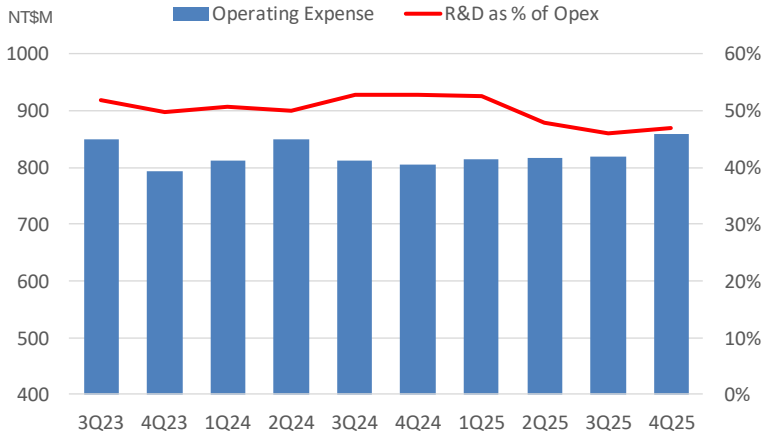

ESG Achievements

- WIN recognized in DJSI World Index for the fifth consecutive year. (2020~2024)
- WIN has been included in the S&P Global Sustainability Yearbook for the sixth consecutive year. (2020~2025)
- WIN ranked in the top 5% among TPEx-listed companies for the Corporate Governance Evaluation for the eleventh consecutive year. (2015~2025)
- ISS ESG Rating: Awarded “Prime” status for two consecutive years (2024–2025)
- WIN won the 17th TCSA Sustainability Report - Gold Award.
- 2024 MSCI ESG Rating: A
- 2025 4th Net-Zero Industry Competitiveness Award: Excellence Award

OPERATIONAL ANALYSIS OVER THE PAST TWO YEARS

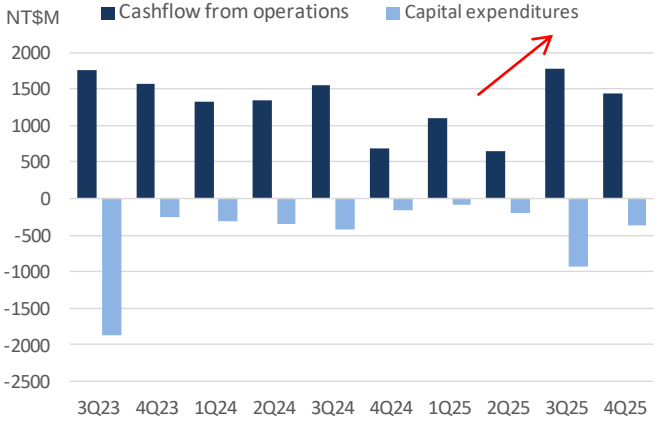

Well-Controlled Opex, Ongoing R&D Investment, and Positive Operating Cash Flow

Operating expense trend

- Over the past ten quarters, Opex has been kept at a stable level.
- On average, approximately 50% of Opex was allocated to R&D, reinforcing our technological strengths.

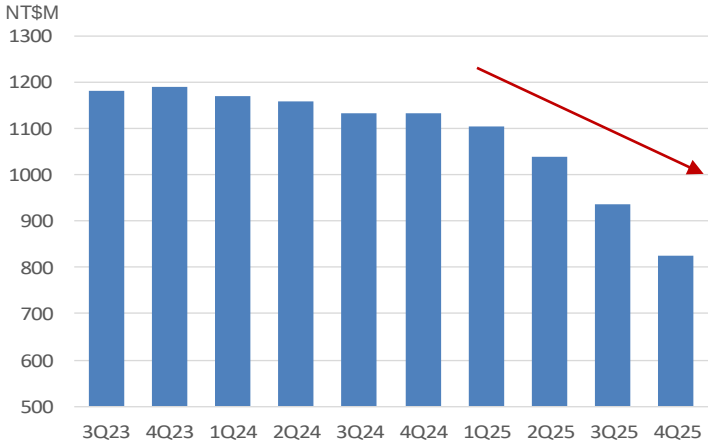

Operating cash flow vs. Capex

- Over the past ten quarters, operating cash flow has remained positive, with a notable increase in 2H25.
- From 4Q23 to 2Q25, capex was tightly managed and reduced. Starting in 2H25, project-based capex resumed.

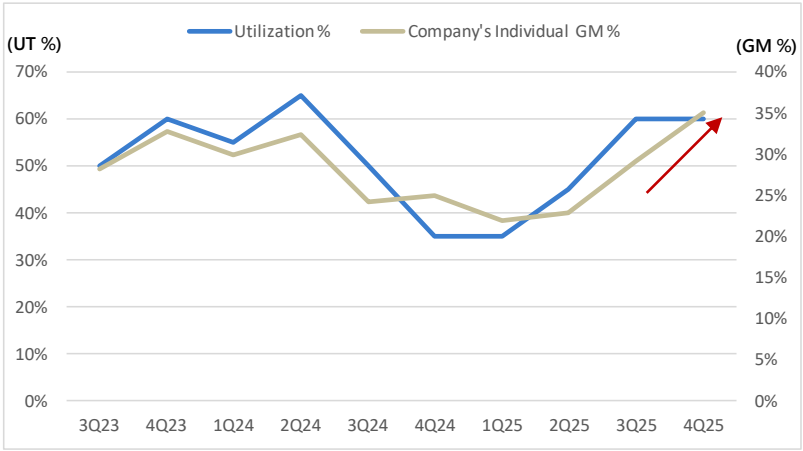

Utilization Recovering and Depreciation Pressure Easing

Depreciation trend

- With depreciation past its peak and a reduced fixed-cost burden, quarterly depreciation expense further declined to below NT$1billion in 2H25.
- With an improved product mix, operating cash inflow increased in 2H25 despite lower depreciation and amortization.

Company's individual GM vs. UT ratio

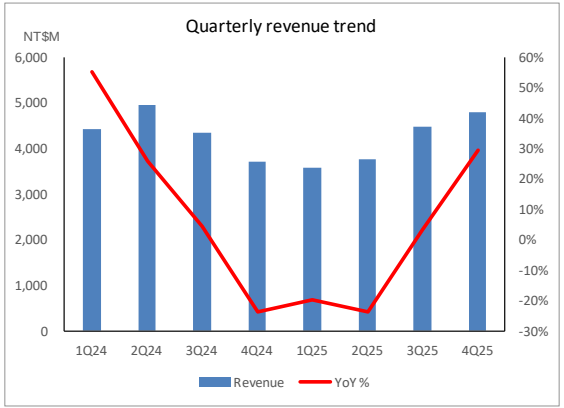

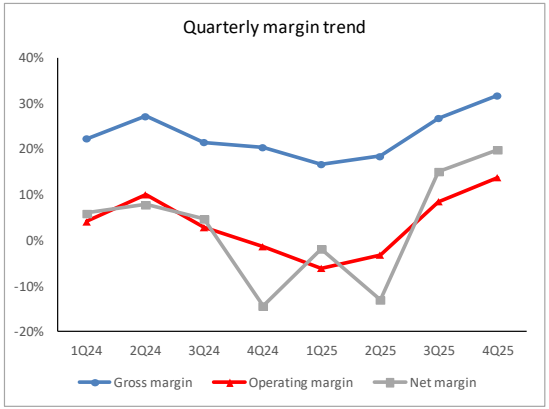

- As capacity utilization recovered, the benefits of an improved product mix began to materialize.

QUARTERLY RESULTS & GUIDANCE

Revenue & Margin Trend

- 4Q25 consolidated revenue was NT$4,794 mn, up 7% QoQ and 29% YoY, driven by increased shipments of higher-margin products, resulting in growth on both a sequential and annual basis.
- 4Q25 capacity utilization maintained at 60%. Supported by a more favorable product mix, individual GM improved to 35.1%. In addition, the relevant profit generated by a listed Chinese customer held by our consolidated subsidiary contributed 0.45 pp to consolidated GM. As a result, consolidated GM reached 31.8% and consolidated OPM was 13.9%, increasing by 4.9 and 5.3 pp, respectively, compared to the previous quarter.

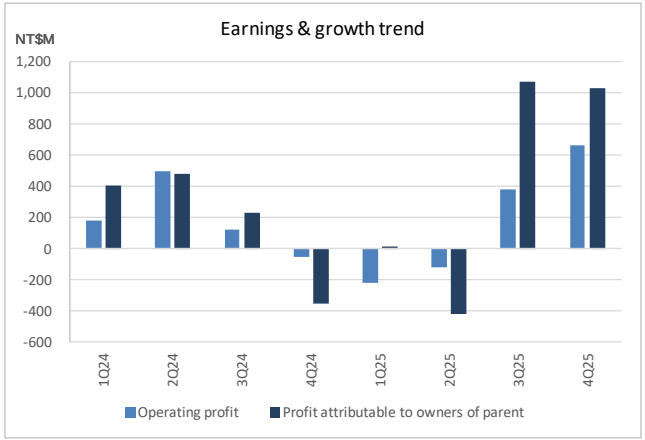

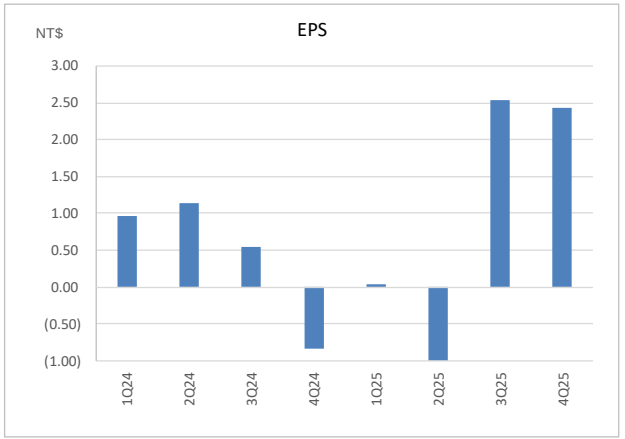

Source: Company.

Earnings Trend

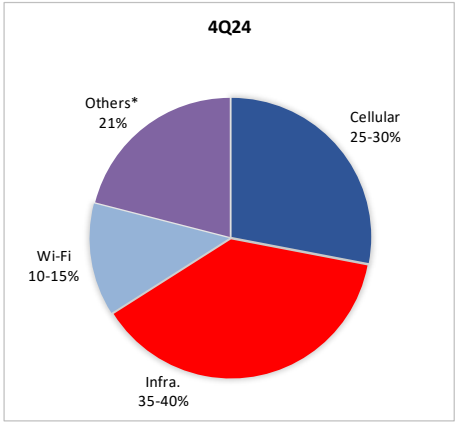

- **In 4Q25, supported by further improvement in GM and effective control of Opex, net income attributable to the parent company reached NT$1,029 mn for the quarter and NT$1,694 mn for the full year 2025. EPS was NT$2.43 in 4Q25 and NT$4.00 for the full year 2025.**

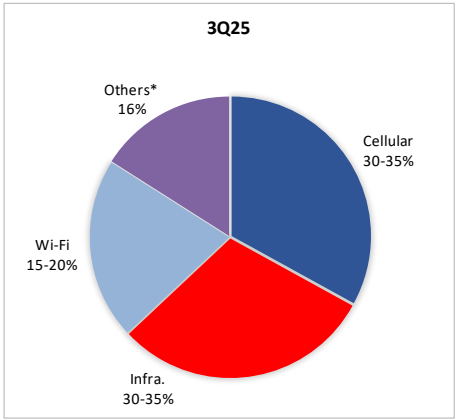

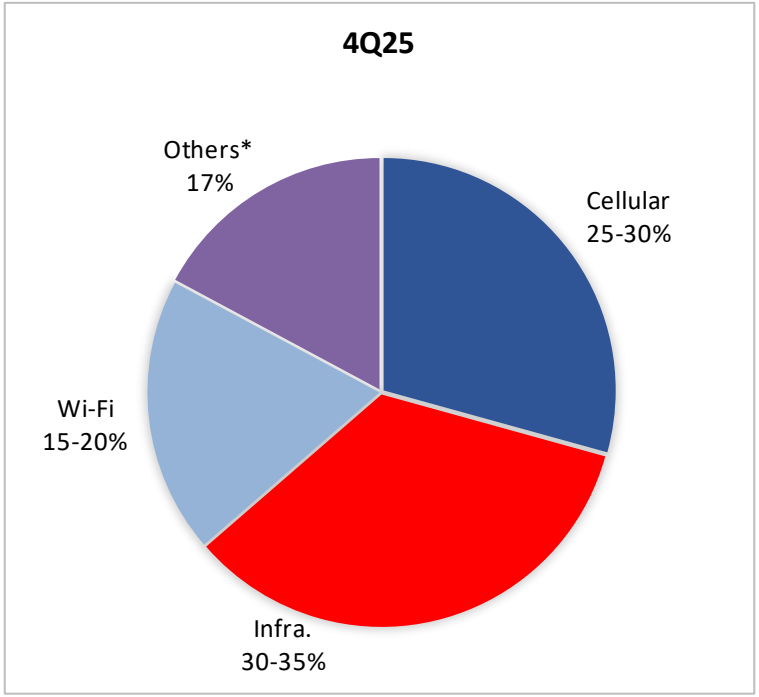

Source: Company.

Product Mix

* Others: Revenue not attributable to main product segments and additional revenue being consolidated in accordance with IFRS.
Source: company.

Guidance

- We expect 1Q26 consolidated revenue to decline high-single digit QoQ.

- We expect 1Q26 consolidated gross margin to be around the level of mid-twenties.

FINANCIAL SUMMARY

Consolidated Statements of Comprehensive Income – Quarterly

Unit: NTD Million	4Q'24	3Q'25	4Q'25 (unaudited)	QoQ	YoY

MARKET OUTLOOK

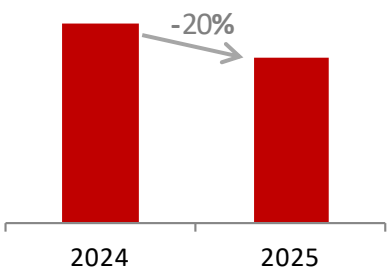

Annual Revenue Share by Applications

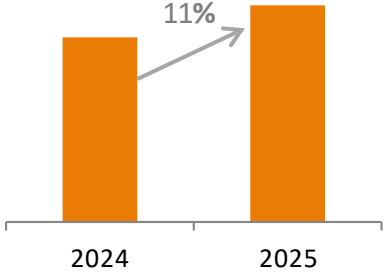

2025 Review

Cellular

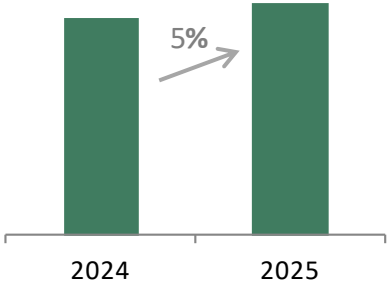

- Refocused on mid-high and premium models.

Wi-Fi

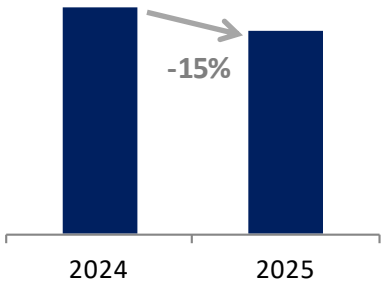

- The Wi-Fi 7 market continues to penetrate into market.
- Wi-Fi 6 adoption continues to expand, gradually replacing Wi-Fi 5

Infrastructure

- Propelled by new satellite launch with new freq. spectrum in 2025.
- Contribution from GaAs optical driver IC.

OE

- New player took some market share on SP 3D Sensing

2026 Market Outlook

Cellular

Wi-Fi

Infra.

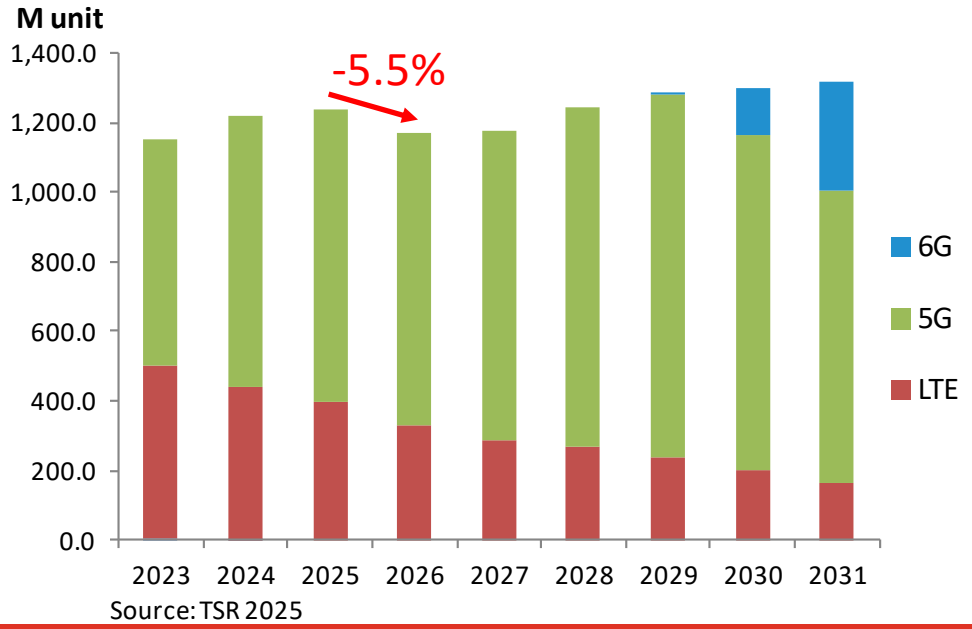

OE

5G Adoption Rate Keep Rising

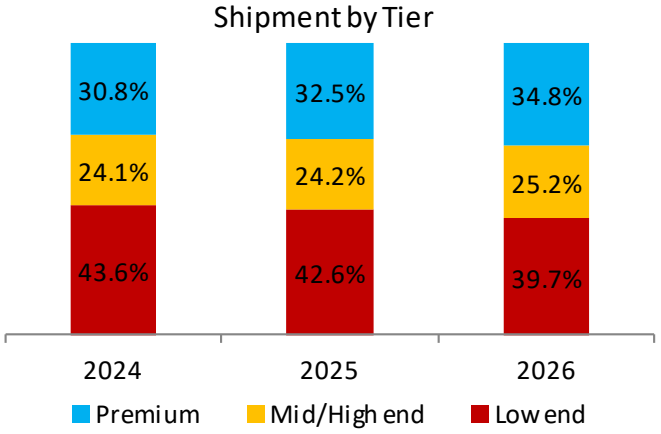

- TAM impacted by insufficient memory for smartphone shipment.
- WIN keeps focusing on mid-high and premium models.

Cellular Penetration Rate				
	2025	2026	2027	2028
5G	67.9%	72.0%	75.4%	78.3%
6G	0.0%	0.0%	0.0%	0.0%

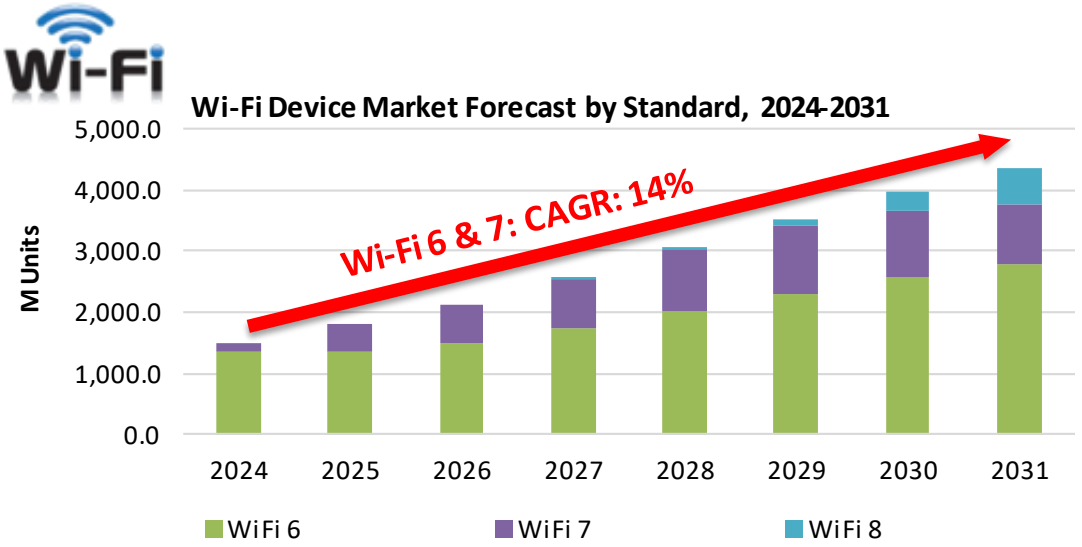

Source: TSR 2025

Wi-Fi 7 is the Main Growth Engines

- The market is driven by the adoption of Wi-Fi 6 and the upgrade to Wi-Fi 7.
- The Wi-Fi 7 market continues to grow in 2026 for both cellular and router segments.

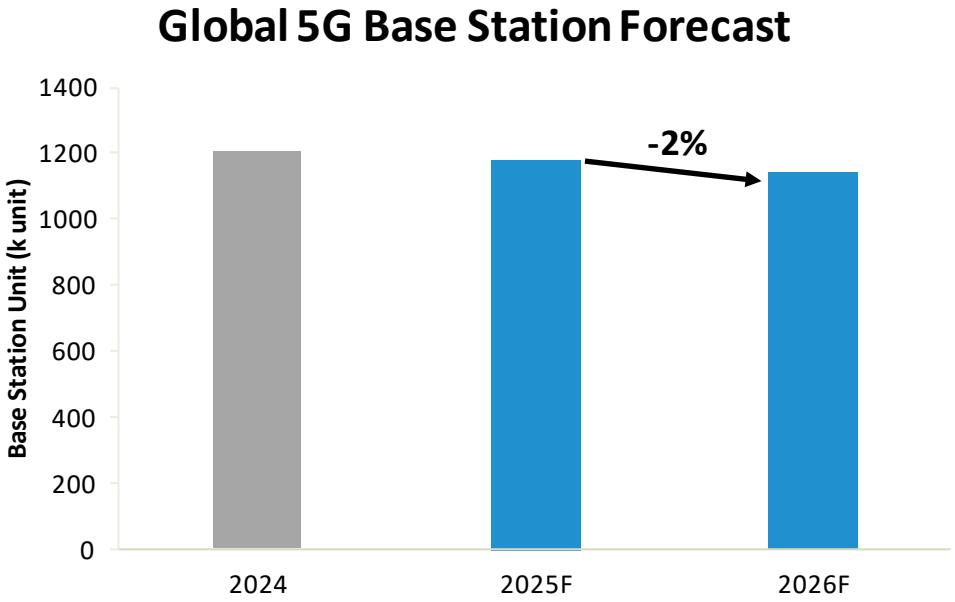

Source: TSR 2025

Base Station Market Forecast

- Capital expenditures of operator are projected to decline at a CAGR of 2%.

1.6T Optical GaAs Driver in AI Datacenter

- GaAs driver market growth is driven by AI datacenter booming in 2026.

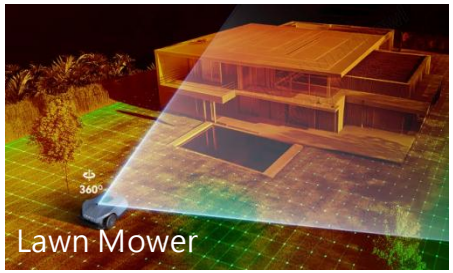

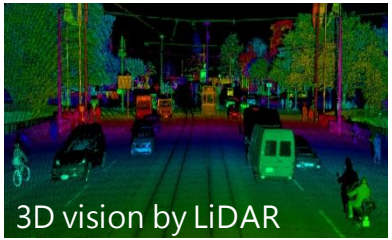

Source: WIN Semi.

VCSEL Sensing Market

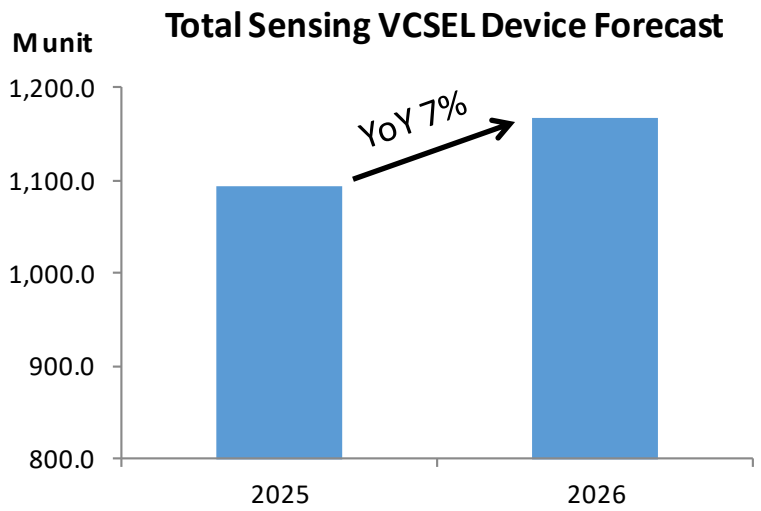

- Sensing tech. is driven by human pursue a safe, environmentally friendlier, and more immersive experience lifestyle.
- Market growth is driven by consumer, and adopted in automotive applications.

Satellite Connectivity is Expanding

- New Freq. band (E/V) is being adopted in satellites to expand capacity from 2025 to 2026.
- Emerging opportunities for satellite-to-smartphone (direct to cell) services.

Satellite to Gateway	Ku/Ka-band **(17.8-19.3/27.5-30GHz)** E-band **(71-86GHz)** V-Band (New) **(37.5-40, 47.2-50.2GHz)**
Gateway to Satellite	Ku/Ka-band **(17.8-19.3/27.5-30GHz)** E-band **(71-86GHz)** V-Band (New) **(37.5-40, 47.2-50.2GHz)**

Spectrum Proliferation is the Growth Engine

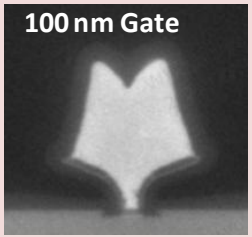

WIN's leading Tech. for Satcom in W-Band

win SEMICONDUCTORS

GaAs

☐ 4V PP10 GaAs pHEMT

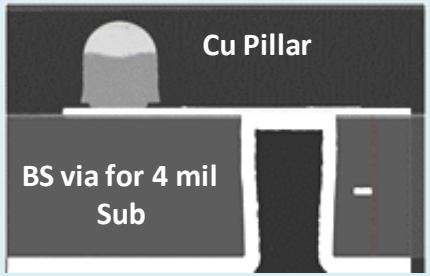

- 0.1μm EBL D-pHEMT
- Low Parasitic
- 2mil Substrate TSV

GaN

☐ NP10

- 0.1μm EBL GaN HEMT
- 2/4 mil Substrate TSV with COV
- **High Power Efficiency**
- **High Linearity**
- QFN/Flip-Chip

WIN's advantages in 6-inch process capability from GaAs to InP

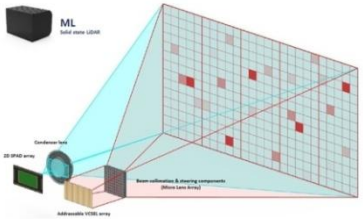

- WIN possesses the world's largest GaAs 6-inch wafer capacity, technology, and expertise.
- By leveraging the technology and experience from 6-inch GaAs capability, WIN is now developing 6-inch InP capability with the following advantages:
  - Faster time-to-market
  - Lower entry barriers (Leveraging deep and extensive production experience of 6-inch compound semiconductors)
  - Limited capex required (Leveraging existing 6-inch equipments and facilities)

AI Associated Sensing Applications

- AI-adopted devices/vehicles with 3D sensing technologies for innovative future life
