Main Product – BMC

The Baseboard Management Controller (BMC) is used for remote monitoring and management of the host system. It is typically based on an ARM System on Chip (SoC) that integrates graphical and logical control, allowing remote access via a dedicated or shared network. It has multiple connections to the host system, enabling it to monitor hardware through sensors and flash memory BIOS/UEFI, provide console access via serial or physical/virtual KVM, and log events related to the host system's power cycling.
