日月光投資控股概覽

ASE Technology Holding Co. Ltd.
Global largest OSATs (over 1/3 market share)
2024 ATM revenues: US$10.2Bn (GM% 22.5%/OPM 10%)
2024 ASE HoldCo. Net profits: US$1Bn
Approximately 95k employees worldwide, 56k in TW
Market cap: $23 billion / TWSE: 3711; NYSE: ASX
ASE Inc.
Established in 1984
Semiconductor assembly, test service provider
SPIL
Established in 1984
Semiconductor assembly, test service provider
Joined ASEHC in 2018
USI
Established in 1976
Electronic design and manufacturing service provider

全面成長的新浪潮正在興起

Source: Gartner

先進封裝有助於人工智慧擴展

More than Moore	Lowering Overall Cost	Efficiency & Integration
Demand for AI performance is faster than Moore's Law	Novel design & process at packaging to lower overall development cost	More functional blocks and power efficiency

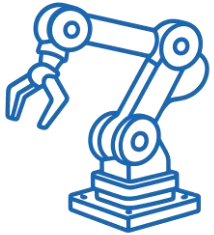

High Density Heterogeneous Integration using Advanced Packaging is a key enabler

日月光主導市場地位的關鍵支柱

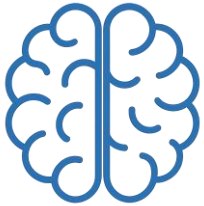

Scale

Global largest OSATs with highest operational efficiency

Automation

Automated production offering for all process lines

Technology

Technology leadership with comprehensive offering

Presence

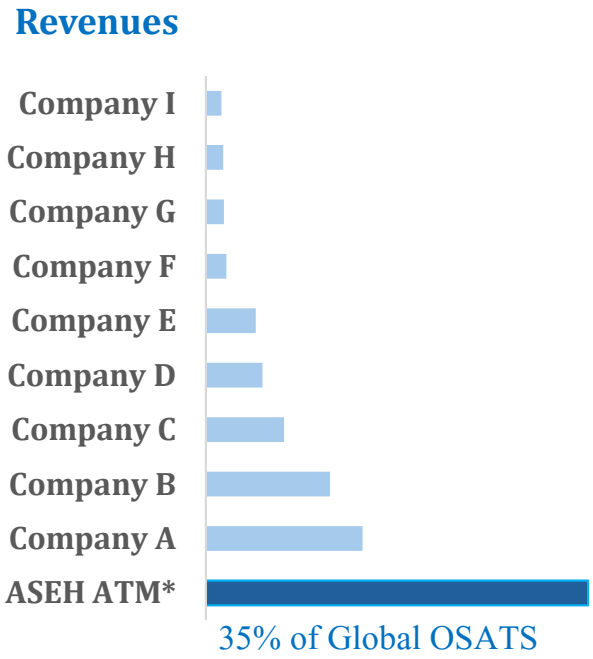

Global footprint and a wide customer/ product portfolio

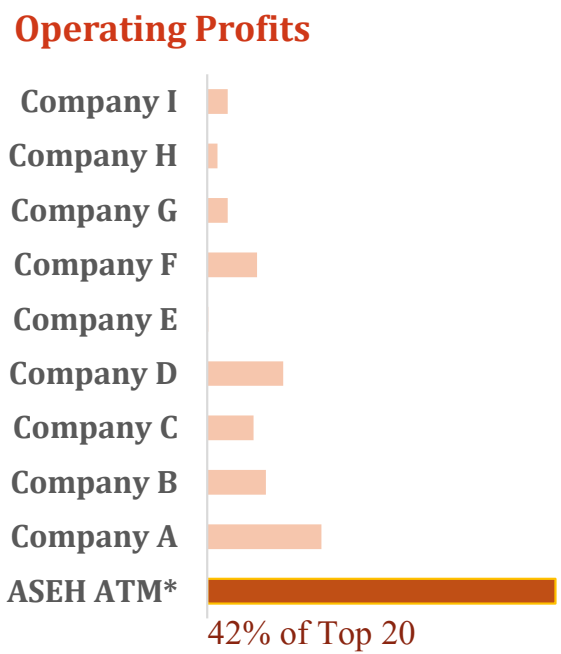

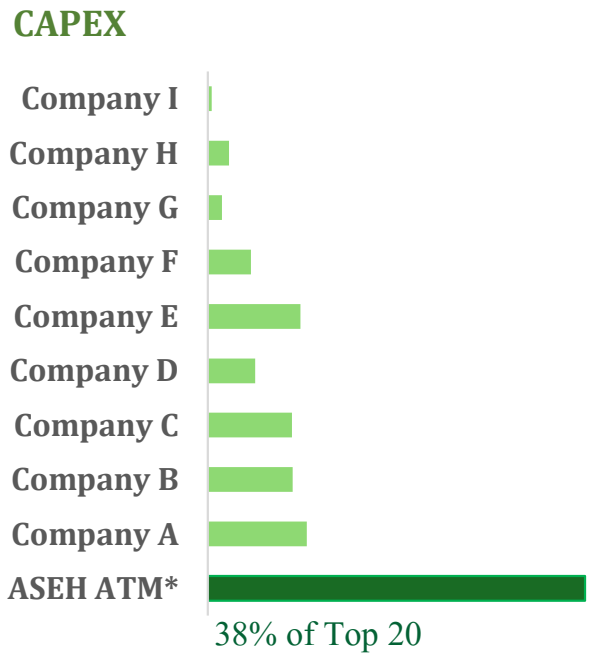

Resources

Strong financial capabilities and a deep talent pool

規模至關重要

**ASEH ATM includes revenues related to SiP and Wifi*

自動化亦有其必要性...

2011 The Inaugural Year of the Factory Automation Initiative

2024

- ✓ 56 lights out factory
- ✓ AI platform for manufacturing process optimization
- ✓ Automation across all product lines

Efficiency

- Higher labor productivity
- Higher space efficiency
- Shorter cycle time

Consistency

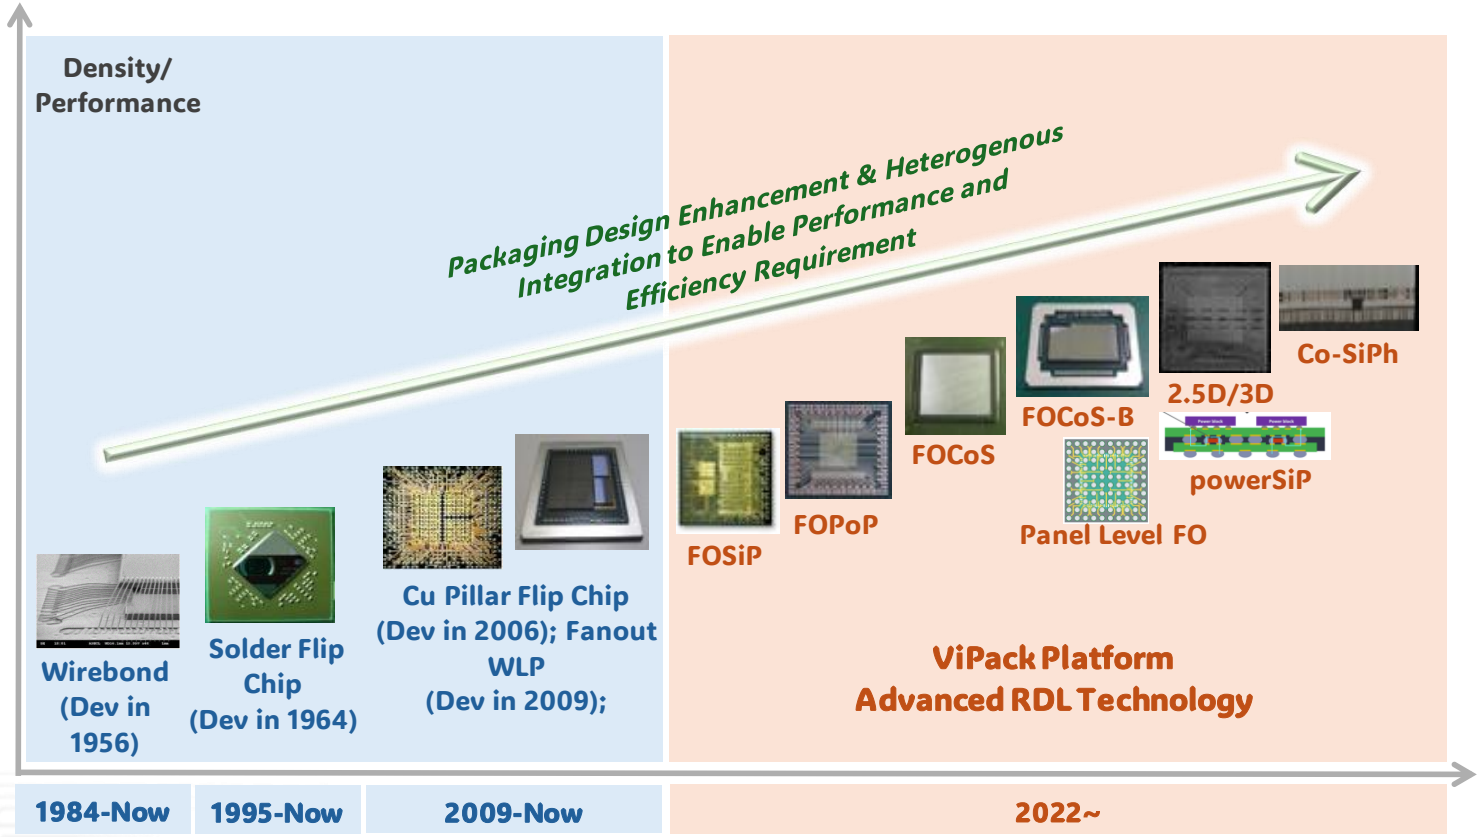

- Improving yield rate
- Manufacturing process optimization and yield enhancement through AI & Big data analysis

Traceability

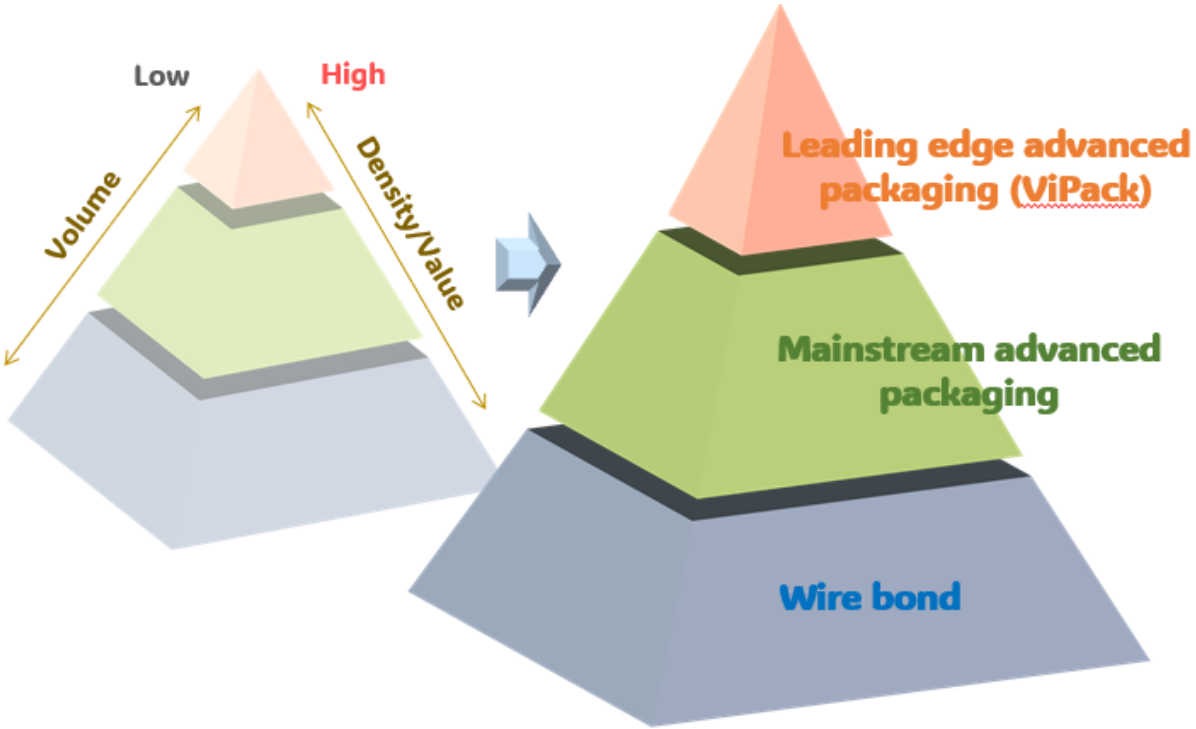

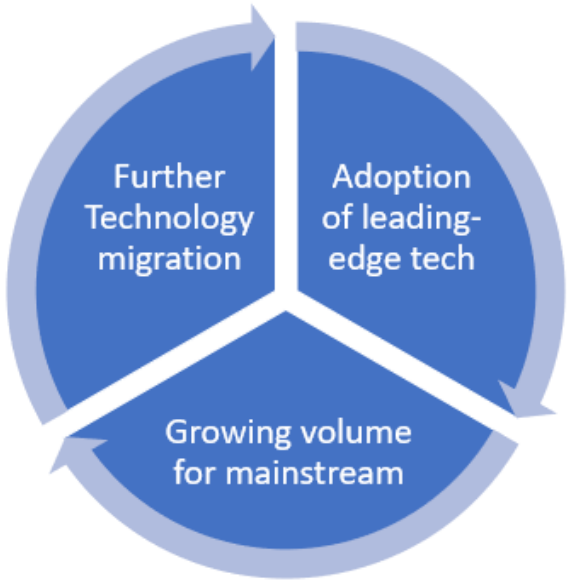

- Better traceability for inventory management, processing history, and real-time quality status

提供全面性的尖端技術

Density/
Performance
Packaging Design Enhancement & Heterogenous Integration to Enable Performance and Efficiency Requirement
Wirebond (Dev in 1956)
Solder Flip Chip (Dev in 1964)
Cu Pillar Flip Chip (Dev in 2006); Fanout WLP (Dev in 2009);
FOSiP
FOPoP
FOCoS
FOCoS-B
Panel Level FO
2.5D/3D
powerSiP
Co-SiPh
ViPack Platform
Advanced RDL Technology

2022~

全方位的機會

Low
High
Volume
Density/Value
Leading edge advanced packaging (ViPack)
Mainstream advanced packaging
Wire bond

Further Technology migration
Adoption of leading-edge tech
Growing volume for mainstream

測試服務的加速成長

Scale

- Global largest outsourced testing provider
- Complete offering of wafer probing, final test, burn-in and SLT

Turnkey

- Shorter cycle time
- Easier supply chain management
- Increasing need for testing in better packaging flow of AI/HPC devices

Automation

- Efficiency
- Traceability
- Consistency
